

GL-30200 Dash Mount Remote for Golight Stryker Wireless Remote Control Spotlight

Part #: GL-30200

Dash mounted remote control for Golight Stryker wireless remote control spotlights and Golight Radioray wireless remote control searchlights. While specified for the Golight Stryker series (GL-3XXX), this remote works with the Golight Radioray series, if those wireless remote control spotlights (GL-7XXX or GL-2XXX) were purchased within the last 3 years, this remote will work with those spotlights as well.

Golight remote control spotlights are based on radio waves, not infrared (like your garage remote). As such, these remote controls are effective to 150 feet.

This remote control is considered dash mounted because once the rubber cover is removed, the unit can be attached to any mounting surface by fastening 4 screws through the holes shown below. The rubber cover is replaced, providing weather resistant protection to the internal electronics.

Powered by 2 MN-21 batteries, which are included and last approximately 1 year, the unit has a series of dip switches. The dip switches enable the user to select one of 65,000 channels to communicate with a specific remote control spotlight.

This dash mounted remote control features an on/off button, a fast/slow selector and 4 directional buttons. The motorized remote control spotlight will move in a direction as long as the button is depressed. Once released, the remote control spotlight will hold that position.
